

For centuries, nearly every natural gemstone has been treated in one way or another to improve its clarity, color or brilliance.

It is part of our very human desire to bring out the best in what nature has given us.

Now there is a process that allows us to do the same for diamonds.

TEVA Diamonds

Revealing Nature's Hidden Beauty

TEVA Diamonds

Nature is Beautiful,
but not always
perfect ...

Before

The enhancement process reveals
the diamond's hidden beauty.

After

Providing not only exceptional
brilliance and clarity but VALUE
as well.

Diamonds of high clarity are very rare in nature, making them outrageously expensive. Teva Diamond's clarity enhancing process takes nature's small imperfections and renders them invisible to the naked eye, without altering the stone in any other way; color, cut and carat weight remain unchanged.

Not all inclusions can be treated and not all diamonds are suitable for enhancement. We hand-selected each diamond based on its natural inherent beauty and its suitability for treatment, allowing for the diamond's full potential to shine through. Giving you a larger, more beautiful and brilliant diamond than you ever dreamed possible.

Unlike many treated gemstones, the treatment on a clarity enhanced diamond is virtually permanent. Only your jeweler can remove the treatment through heat in excess of 1200 degrees or prolonged exposure to acid. We are so confident in the treatment's durability that every diamond comes with a Lifetime Guarantee.

If anything should ever cause the treatment to come out we will restore the treatment free of charge. No need to compromise on what you truly want; by selecting a natural, clarity enhanced diamond, you can have the diamond of your dreams and for nearly half the price.
